## Bug 553375 – Headers and footers of printed pages are random garbage

[View Bug Activity](#) | [Clone This Bug](#)

Opened by [Will Thompson](#) (reporter, [points: 8](#))  
2008-09-23 08:29 UTC [[reply](#)]

**Product:** [epiphany](#)  
**Component:** Printing  
**Version:** 2.22.x  
**Status:** UNCONFIRMED  
**Priority:** Normal  
**Severity:** normal

Please describe the problem:

When I print (or print preview) a page from Epiphany, the header and footer are not (page name, url) and page number or similar, but are instead random high-codepoint garbage.

Steps to reproduce:

1. Open a web page.
2. Hit Print.
3. Give the resulting page to a contractor.

Actual results:

I look surprised when I notice that the header and footer are a bunch of idiographs rather than anything legible.

Expected results:

Fewer surprises.

Does this happen every time?

Yes; it is reproducible on others' machines, but with different garbage for the same page. This suggests to me that it's using the contents of uninitialized memory.
